

E-One IPL hair removal

No more hairy situations!

The E-One is the first and only Intense Pulsed Light (IPL) hair removal device medically certified for personal use at home. The E-One is easy to use, safe, convenient and more cost effective than countless salon visits.

- **Permanent and progressive hair removal**

The E-one only requires 8 to 12 treatments to enjoy a hair-free life. Only 1 touch-up per year is needed to maintain smooth and hairless skin.

- **Painless and safe for all skin types**

The E-One can be used on any part of the body including face, mankini lines and back. Suitable for every kind of skin from phototype I (fair) to V (dark).

- **Get back into the sun sooner**

Most IPL machines require you to wait up to 4 weeks before sun exposure. The E-One's innovative technology lets you go back into the sun whenever you like without risk of marks or scarring.

- **Inspiration from professional technology**

The E-One personal hair removal system gives the same results as professional results.
